 **ALONG THE SHORE**  
Life On a Piling  
Wings support weight and keep birds from falling. The webbed feet help them swim. The long neck helps them see over the water. The long beak helps them catch fish. The long legs help them walk on the piling. The long tail helps them balance. The long wings help them fly. The long neck helps them see over the water. The long beak helps them catch fish. The long legs help them walk on the piling. The long tail helps them balance. The long wings help them fly.
