CRS Report for Congress

Prepared for Members and Committees of Congress

Summary

The transmission of copyrighted sound recordings to the public by over-the-air AM/FM radio stations is an activity that implicates the right of public performance under the Copyright Act. However, under current law, terrestrial radio broadcasters who play copyrighted music need only compensate songwriters for the performance of their musical compositions and not the holders of the copyright in the sound recording (who may include the recording artist, musicians, and record label). Yet if music is publicly performed by digital audio transmission, such as by Internet radio stations (“webcasters”) or satellite radio companies, both the songwriter and the recording artist are entitled by law to receive royalties from the transmitting entity.

Sound recording copyright holders assert that there is no justifiable reason for the copyright law to treat sound recordings differently from other categories of performable copyrighted works. They maintain that recording artists deserve to be fairly compensated by broadcast radio for public performance of their works just as songwriters and music publishers are currently being paid for such activity. They also believe that the copyright law should require the same royalty obligations for terrestrial broadcasters and digital music services, so as not to advantage some of these commercial competitors over others.

The broadcast radio industry, however, has defended its statutory exemption from paying royalties to recording artists for non-digital public performances, by arguing that radio broadcasts serve as free publicity and promotion of the sound recordings, and that performers and record producers are compensated through sales of compact discs or MP3 music download files, concert tickets, and merchandise. Furthermore, the broadcasters are concerned that any new royalty obligation imposed on radio stations could result in less copyrighted music being performed (either because stations may change their format to talk radio or they may need to broadcast an increased number of advertisements), or that the additional royalties could adversely impact the financial health and existence of smaller radio stations.

The Performance Rights Act, H.R. 848 and S. 379, introduced in the 111th Congress, would expand the public performance right of sound recording copyright holders to include analog audio transmissions—a change that allows performers to seek royalty payments from terrestrial radio stations. Concurrent resolutions have been introduced in both houses, the Supporting the Local Radio Freedom Act (H.Con.Res. 49, S.Con.Res. 14), expressing that Congress should not impose any new performance fees or royalties for over-the-air broadcasts of sound recordings by local radio stations. These opposing legislative measures reflect the contentious debate between the recording industry that desires compensation from AM/FM radio stations for performers and producers of sound recordings, and the broadcast industry that opposes changes to the status quo.

Introduction

The scope of the public performance right granted by the Copyright Act is broader for musical works than for sound recordings. This difference accounts for the current structure of the royalty obligations of terrestrial radio stations that publicly perform copyrighted music: whereas the musical work copyright holders (songwriters and music publishers) are entitled to receive royalty fees from the radio broadcasters, the sound recording copyright holders (singers, musicians, and record labels) lack any right to demand payment for over-the-air broadcasts of their work. However, since 1995, sound recording copyright holders have possessed a limited public performance right—the right to control public performance of their work by means of a digital audio transmission. Thus, the royalty obligations for Internet radio broadcasters, satellite radio broadcasters, and cable television operators that transmit copyrighted music to their audiences are different than those of terrestrial AM/FM radio stations: entities that digitally transmit music to their listeners must pay royalties not only to the songwriters, but also to the recording artists.

Several hearings were held in the 110th and 111th Congresses examining whether the performance right should be expanded for sound recordings to encompass non-digital audio transmissions, in order to allow performers and record companies to receive compensation when broadcast radio stations play their sound recordings.¹ This report offers information regarding this issue and a legal analysis of two bills that have been introduced in the 111th Congress, H.R. 848 and S. 379 (the Performance Rights Act), that would amend the Copyright Act to provide sound recording copyright holders with a right to receive royalties from terrestrial radio stations that publicly perform their work.

Background

Copyright is a federal grant of legal protection for certain works of creative expression, including books, movies, photographs, and music.² A copyright holder possesses several exclusive legal entitlements under the Copyright Act, which together provide the holder with the right to determine whether and under what circumstances the protected work may be used by third parties.³ Generally, a party desiring to reproduce, adapt, distribute, publicly display, or publicly perform a copyrighted work must either (1) obtain the permission of the copyright holder (usually granted in the form of a license agreement that establishes conditions of use and an amount of monetary compensation known as a royalty fee), (2) comply with the terms of compulsory licenses established by law,⁴ or (3) assert that such use falls within the scope of certain statutory limitations on the exclusive rights such as the “fair use” doctrine—but the validity of such claim

may be subject to the judgment of a federal court.⁵ The unauthorized use of one of the exclusive rights of the copyright holder constitutes infringement.⁶

Federal law recognizes copyright protection for two separate categories of works in the musical realm: “musical works” and “sound recordings.”⁷ A musical work refers to the notes and lyrics of a song, while a sound recording is a recorded version of a musician singing or playing a musical work, as that rendition is captured in a tangible medium of expression such as a compact disc, cassette tape, vinyl album, or MP3 file. Thus, there are potentially two different creative artists (and two different copyrights) when it comes to a single piece of recorded music: the holder of the copyright in the underlying musical work embodied in the sound recording, and the holder of the copyright in the sound recording itself. The musical work copyright holder is typically the individual who writes the notes and lyrics of a musical composition, or a music publisher who purchases or licenses copyrights from song composers. The sound recording copyright holder may include the recording artist, the background musicians, and the record label that helps with the production of the sound recording. It is possible that one individual can be both the sound recording copyright holder as well as the holder of the copyright in the musical work; for example, someone who is both a singer and songwriter may hold two independent copyrights to a piece of recorded music. However, many songwriters are not performers, and many performers are not songwriters.

While both musical works and sound recordings are eligible for copyright protection, the Copyright Act does not provide the same degree of public performance⁸ protection to sound recordings that it grants to the underlying musical composition contained in the sound recording. The holder of a copyright in the musical work has a more robust right to control public performance in a wide variety of situations, while the sound recording copyright holder has a far more limited right to control public performance of sound recordings—only when the sound recording is transmitted to the public through digital means.⁹ The difference in the scope of the public performance right under the Copyright Act for these two copyright holders, and its impact on royalty obligations for third parties wishing to publicly perform sound recordings, may be illustrated by the following scenarios:

- An entity that wants to broadcast a sound recording for the public through non-digital transmissions, such as a terrestrial AM/FM broadcast radio station,¹⁰ must pay royalties to the musical work copyright holder (e.g., the songwriter) for the right to publicly perform the musical work, but the radio station does *not* have to pay royalties or otherwise get permission from the sound recording copyright holders (the recording artist, musicians, and record label).
- In contrast, if the music is transmitted to the public through digital means, the two music copyright holders’ public performance rights (and the transmitting

⁸ According to the Copyright Act, to “perform” a work means to recite, render, play, dance, or act it, either directly or by means of any device or process. 17 U.S.C. § 101.

⁹ 17 U.S.C. § 106(6).

¹⁰ A “broadcast” transmission is defined as a transmission made by a terrestrial broadcast station licensed by the Federal Communications Commission. 17 U.S.C. § 114(j)(3).

entity's royalty obligations) are different. If the public performance of the sound recording involves a digital audio transmission—as used by an Internet radio broadcaster (or “webcaster”), satellite digital radio company, or a traditional AM/FM radio station offering a simultaneous Internet stream of its over-the-air programming—then both the songwriters *and* recording artists have the legal entitlement to be paid for that activity. Stated differently, the webcasters and satellite radio companies, because they transmit audio using digital technologies, are required to pay royalties to both the musical work copyright holder and the sound recording copyright holder.

History of the Sound Recording Performance Right

A review of the history of the performance right in the Copyright Act is helpful in understanding why the scope of public performance protection differs for sound recordings and musical works. While musical works have enjoyed a full right of public performance for over 100 years, the Copyright Act did not offer any legal protection to sound recordings until 1971, when Congress enacted a law that granted exclusive rights to reproduction and distribution to sound recording copyright holders as a response to the increased amount of unauthorized duplication of records and tapes.¹¹ However, at that time, Congress decided not to grant sound recording copyright holders the right to control public performance, partly due to opposition by television and radio broadcasters and jukebox operators who resisted any changes to the Copyright Act that would require any additional royalty payments beyond those already mandated for songwriters and music publishers, and also because Congress considered the rights to control reproduction and distribution to be sufficient enough to address the immediate problem of record piracy.¹² In the most recent general revision of the Copyright Act in 1976, Congress directed the U.S. Copyright Office to submit a report by January 8, 1978, that would recommend whether Congress should grant a public performance right for sound recordings. In that report, the Register of Copyrights believed that a public performance right for sound recordings was warranted:

Broadcasters and other users of recordings have performed them without permission or payment for generations. Users today look upon any requirement that they pay royalties as an unfair imposition in the nature of a “tax.” However, any economic burden on the users of recordings for public performance is heavily outweighed ... by the commercial benefits accruing directly from the use of copyrighted sound recordings.... To leave the creators of sound recordings without any protection or compensation for their widespread commercial use can no longer be justified.¹³

However, at the time, Congress took no action in response to the advice of the Register.

Technological advances in music transmission methods in the early 1990s helped persuade Congress to reexamine the issue of public performance rights for sound recording copyright

¹¹ Sound Recording Amendment, P.L. 92-140, 85 Stat. 391 (1971). By its terms, the law was effective on February 15, 1972, and applies to sound recordings made on or after that date.

holders. Record companies were concerned that consumers would use certain new technologies such as on-demand digital cable music services and other interactive services to listen to music and potentially record the digital audio transmissions, thereby eliminating their need to purchase physical sound recording media.¹⁴

In response, in 1995, Congress passed the Digital Performance Right in Sound Recordings Act,¹⁵ which for the first time ever granted copyright owners of sound recordings an exclusive right to perform their works publicly—although the right was limited only to digital audio transmission of their sound recordings. However, the law specifically exempted traditional over-the-air radio broadcasts from the newly created right to control digital public performances of sound recordings.¹⁶ The Senate report accompanying the Digital Performance Right in Sound Recordings Act noted that

The Committee, in reviewing the record before it and the goals of this legislation, recognizes that the sale of many sound recordings and the careers of many performers have benefitted considerably from airplay and other promotional activities provided by both noncommercial and advertiser-supported, free over-the-air broadcasting. The Committee also recognizes that the radio industry has grown and prospered with the availability and use of prerecorded music. This legislation should do nothing to change or jeopardize the mutually beneficial economic relationship between the recording and traditional broadcasting industries.¹⁷

In 1998, with the passage of the Digital Millennium Copyright Act,¹⁸ Congress clarified that the digital performance right also applied to sound recordings performed by noninteractive, nonsubscription Internet radio broadcasters (webcasters).¹⁹ As a result of these two laws, webcasters, satellite radio broadcasters, and cable broadcasters are now required to pay royalties to sound recording copyright holders when they digitally transmit their recordings, in addition to the royalties that are due to the musical work copyright holders. Terrestrial radio stations that stream (simulcast) their programming on the Internet also are required to pay royalties to sound recording copyright holders because that activity involves a digital audio transmission. Radio stations that only broadcast copyrighted sound recordings over-the-air, however, are not subject to the digital performance right for sound recordings and thus need only compensate the musical work copyright holder for the public performance.

Licenses for Public Performance of Copyrighted Music

A license is a form of legal permission in which the copyright owner authorizes third parties to use the work, in exchange for a payment of royalty fees and compliance with certain conditions specified in the license. Some licenses are negotiated voluntarily between a copyright owner and

¹⁸ P.L. 105-304 (1998).

¹⁹ Section 405 of P.L. 105-304.

the third party wishing to use the work. Other licenses are created by Congress and appear in the Copyright Act. These “statutory” or “compulsory” licenses compel copyright owners to allow third parties to use creative works under certain conditions and according to specific requirements, in exchange for payment of royalty fees at a rate determined by a federal government body known as the Copyright Royalty Board.²⁰ Therefore, a user of a statutory license need not obtain or negotiate permission for using a copyrighted work from the copyright owner; that permission is “compulsory.”

When copyrighted sound recordings are transmitted through either analog or digital means, the songwriter who composed the underlying musical composition contained in that sound recording is compensated according to a voluntary license agreement that was the product of private negotiations between the transmitting entities and the musical work copyright holders, who are represented by performing rights organizations such as the American Society of Composers, Authors, and Publishers (ASCAP), Broadcast Music, Inc. (BMI), and the Society for European Stage Authors and Composers (SESAC). A broadcast radio station, webcaster, or satellite radio company must pay license fees to ASCAP, BMI, and/or SESAC for the right to publicly perform the copyrighted musical works made by composers, songwriters, and music publishers who are represented by those organizations.

However, public performance of sound recordings through digital transmission is subject to a compulsory license created by Congress and found in Section 114 of the Copyright Act. Webcasters and satellite radio companies need not negotiate with recording artists for permission to digitally transmit their sound recordings; they only have to comply with the terms of the Section 114 compulsory license and pay the royalty rate prescribed by the Copyright Royalty Board.²¹ Collection of royalty payments under the compulsory license for digital transmissions of sound recordings is handled on behalf of sound recording copyright holders by SoundExchange, a nonprofit entity originally created by the Recording Industry Association of America.

The Debate Over Altering the Existing Performance Royalty System

The broadcast radio industry has defended its statutory exemption from paying sound recording copyright holders for non-digital public performances, by arguing that radio broadcasts serve as free publicity and promotion of the music, and that performers and producers of sound recordings are compensated through sales of compact discs or MP3 music download files, concert tickets, and merchandise.²² Furthermore, radio broadcasters observe that the broadcaster exemption reflects a balanced, symbiotic economic relationship between the broadcasting, music, and sound recording industries, that Congress has chosen not to disturb for over 80 years despite repeated

appeals by the recording industry to alter the existing performance royalty system.²³ The broadcasters also predict that any new royalty obligations imposed on radio stations could result in less copyrighted music being performed, either because stations may change their format to talk radio or they may need to broadcast an increased number of advertisements to pay for the additional royalty fees.²⁴ They are also concerned that any new royalty fees will adversely impact financially strapped radio stations' ability to provide non-music services such as local news reporting, weather information, and public service announcements, or even force them to cease operations entirely.²⁵ Finally, they object to comparisons between the United States and other countries with respect to royalty obligations for public performance of sound recordings because of important differences in the intellectual property law of all countries as well as the fact that many foreign broadcasters are owned or heavily subsidized by their governments.²⁶

Sound recording copyright holders have advanced several arguments in support of expanding their performance right. First, they argue that recording artists deserve to be compensated for public performance of their works by broadcast radio just as songwriters and music publishers are currently being paid for such activity.²⁷ They point out that "simple fairness" requires terrestrial radio to pay them for performing their work, as the artists are the ones "who bring the music to life, who attract listeners to a station, and who make it possible for radio to make money by selling advertising."²⁸ Second, they claim that the promotional value offered by terrestrial radio for the performance of their sound recordings has been diminished by listeners seeking out alternative sources of music distribution such as satellite radio and Internet music services.²⁹ Third, they observe that all developed countries in the world except the United States require their radio broadcasters to compensate performers and record labels.³⁰ However, because the United States does not require U.S. radio broadcasters to compensate foreign performers when they play their sound recordings, reciprocity allows foreign broadcasters to deny paying royalties to U.S. performers when they play their works in their countries.³¹ Industry estimates suggest that the loss to U.S. artists in potential foreign performance royalties is about \$70 million.³²

The Register of Copyrights has also offered Congress her opinion on this issue, asserting that there is no legal justification for why the copyright law should treat sound recordings differently from other categories of performable copyrighted works, such as books, plays, and movies.³³ She also believes that the copyright law should require the same royalty obligations for both terrestrial broadcasters and digital music services, to provide a more level playing field for these commercial competitors.³⁴

Legislation in the 111th Congress

Performance Rights Act

Legislation has been introduced in the 111th Congress that would expand the scope of the public performance right for sound recording copyright holders.³⁵ The changes proposed by the Performance Rights Act, H.R. 848 (introduced by Representative John Conyers, Jr.) and S. 379 (introduced by Senator Patrick Leahy), would require terrestrial radio broadcasters to begin paying a royalty to recording artists and record labels when they play sound recordings.³⁶

Identical Provisions

Section 2 of the bills would amend sections of the Copyright Act that currently relate to digital audio transmission of sound recordings by deleting the qualifying term “digital.”³⁷ The bills also would remove the express statutory exemption for nonsubscription broadcast transmissions (which are the type made by traditional AM/FM radio stations) from the Section 114 compulsory license for public performance of sound recordings.³⁸ If this legislation is enacted, copyright owners of sound recordings would enjoy a performance right for all types of audio transmissions, both analog and digital. This right would be subject to a Section 114 compulsory license available to entities that transmit sound recordings both digitally and over the air. The Copyright Royalty Board would be responsible for determining the royalty rate that radio stations would have to pay to sound recording copyright holders.³⁹

H.R. 848 and S. 379 statutorily exempt from the Section 114 compulsory license a nonsubscription radio broadcast of religious services at a place of worship or other religious assembly, and any incidental uses of a musical sound recording (for example, talk radio, including news and sports programming, that uses brief musical transitions in and out of

³³ *Id.* at 2, 4.

³⁴ *Id.* at 8-9.

³⁵ The legislation as introduced is substantially similar to bills in the 110th Congress on this topic, H.R. 4789 and S. 2500.

³⁶ The Copyright Act requires the following division and distribution of the royalty payments made pursuant to a Section 114 compulsory license: 45% of the fee is to be paid to the recording artist, 5% to the background musicians, and 50% to the record label. 17 U.S.C. § 114(g)(2).

³⁷ 17 U.S.C. §§ 106(6), 114(d)(1), 114(j)(6).

³⁸ 17 U.S.C. § 114(d)(1)(A).

³⁹ The two bills differ, however, in the required standard to be used by the Copyright Royalty Board in determining this rate. The rate-making standard is discussed *infra*.

commercials or program segments would be exempt from paying a sound recording performance royalty for such uses of sound recordings).⁴⁰

Section 4 of the bills directs the Copyright Royalty Board to establish a “per program license option for terrestrial broadcast stations that make limited feature uses of sound recordings.”⁴¹ This provision may be most beneficial to stations that utilize primarily a talk-radio format, though they may broadcast sound recordings on infrequent occasions.

Section 5 of the bills states that nothing in the Performance Rights Act shall adversely affect the public performance rights or royalties payable to songwriters or copyright owners of musical works. This provision is intended to preserve songwriters’ existing public performance rights and clarify that the provisions of the Performance Rights Act shall not diminish them.⁴²

Differences Between H.R. 848 and S. 379

H.R. 848 and S. 379 contain several provisions unique to each bill.

Blanket Licenses for Small or Noncommercial Radio Stations

Both bills provide special treatment for certain small or noncommercial radio stations by excusing them from having to pay the royalty fee established by the Copyright Royalty Board; rather, qualifying stations would only need to pay a flat annual rate for a blanket license. Although the two bills were introduced in their respective houses containing the same fixed royalty rate amounts, the House bill was ordered to be reported out of the House Judiciary Committee with a manager’s amendment⁴³ that offered a different rate structure than that of the Senate bill and the House bill as introduced. Under the Senate bill, commercial radio stations that have annual revenue of less than \$1.25 million may elect to pay a fixed royalty amount of \$5,000 per year, while public broadcasting entities (noncommercial educational broadcast stations, including college radio stations)—regardless of their revenue or number of listeners—may elect to pay a flat fee of \$1,000 a year.⁴⁴ The sponsor of the Senate bill claims that more than 75% of existing commercial broadcasting stations in the country would be eligible for the flat fee, blanket license option.⁴⁵ However, the legislation dictates that these fixed-rate royalty fees are *not* to be taken into account in any Copyright Royalty Board rate-setting proceeding, or in any other administrative, judicial, or other federal government proceeding.⁴⁶ The royalty fees under the Senate bill may be summarized as follows:

⁴⁰ 153 CONG. REC. E2605 (extension of remarks, Dec. 19, 2007) (statement of Rep. Darrell E. Issa, in reference to H.R. 4789, 110th Cong., 1st Sess. (2007), which is substantially similar to the House-version of the Performance Rights Act introduced in the 111th Congress).

⁴¹ Section 4 of H.R. 848 and S. 379, amending 17 U.S.C. § 114(f)(2)(B).

⁴² 155 CONG. REC. S1545 (daily ed. Feb. 4, 2009) (statement of Sen. Leahy).

⁴³ Manager’s amendment available at <http://www.cq.com//displayamendment.do?docid=3116587&productId=1>.

⁴⁴ Section 3(a)(1) of H.R. 848 and S. 379.

⁴⁵ 155 CONG. REC. S1545 (daily ed., Feb. 4, 2009) (statement of Sen. Leahy).

⁴⁶ Section 3(a) of S. 379.

Table 1. Royalty Rates for Broadcasters Under S. 379, Performance Rights Act

Annual Revenue	Commercial Broadcaster	Public Broadcasting Entity
Greater than \$1.25 million	Rate to be set by the Copyright Royalty Board	Flat fee of \$1,000 per year
Less than \$1.25 million	Flat fee of \$5,000 per year	Flat fee of \$1,000 per year

Source: Congressional Research Service

In contrast, the House Judiciary Committee approved by voice vote on May 13, 2009, a manager’s amendment that would further reduce the royalty rates for smaller commercial radio stations and public broadcasting stations. The manager’s amendment contains the following tiered royalty fee structure:

Table 2. Royalty Rates for Broadcasters Under H.R. 848, Performance Rights Act, as Ordered to Be Reported Out of the House Judiciary Committee

Annual Revenue	Commercial Broadcaster	Public Broadcasting Entity
Greater than \$1.25 million	Rate to be set by the Copyright Royalty Board	Flat fee of \$1,000 per year
\$500,000 < \$1.25 million	Flat fee of \$5,000 per year	Flat fee of \$1,000 per year
\$100,000 < \$500,000	Flat fee of \$2,500 per year	Flat fee of \$1,000 per year
Less than \$100,000	Flat fee of \$500 per year	Flat fee of \$500 per year

Source: Congressional Research Service, based on information from the manager’s amendment available at <http://www.cq.com/displayamendment.do?docid=3116587&productId=1>.

Standard Used by the Copyright Royalty Board in Setting Royalty Rates

While both H.R. 848 and S. 379 would require the Copyright Royalty Board (CRB) to determine the royalty rate applicable to the performance of sound recordings by commercial radio stations that have gross revenues of more than \$1.25 million per year, the bills differ in the standard that the CRB would use to set the rate. Under the Senate bill, the rate would be determined under a “willing buyer, willing seller” standard,⁴⁷ which is the same one currently being used by the CRB in calculating the royalty rate applicable to Internet webcasters.⁴⁸ The House bill as introduced also followed this approach.

⁴⁷ The standard is described in 17 U.S.C. § 114(f)(2)(B): “[T]he Copyright Royalty Judges shall establish rates and terms that most clearly represent the rates and terms that would have been negotiated in the marketplace between a willing buyer and a willing seller. In determining such rates and terms, the Copyright Royalty Judges shall base [their] decision on economic, competitive and programming information presented by the parties, including—(i) whether use of the service may substitute for or may promote the sales of phonorecords or otherwise may interfere with or may enhance the sound recording copyright owner's other streams of revenue from its sound recordings; and (ii) the relative roles of the copyright owner and the transmitting entity in the copyrighted work and the service made available to the public with respect to relative creative contribution, technological contribution, capital investment, cost, and risk.”

⁴⁸ For more information on the use of this standard in setting royalty rates for webcasters, see CRS Report RL34020, *Statutory Royalty Rates for Digital Performance of Sound Recordings: Decision of the Copyright Royalty Board*, by Brian T. Yeh.

However, the manager's amendment to H.R. 848 would change the standard that would be applied by the CRB in determining the Section 114 compulsory license for public performance of sound recordings. Under H.R. 848 (as ordered to be reported out of the House Judiciary Committee), the CRB would be directed to follow a *modified* "801(b) standard" in setting royalty rates for not only terrestrial radio, but also for Internet webcasters, digital cable music channels, and satellite radio companies. The so-called "801(b) standard" (referring to the section of the Copyright Act, 17 U.S.C. § 801(b)(1), that currently governs the CRB determination of royalty rates for digital cable radio and satellite radio companies) requires the CRB to develop a rate that reflects consideration of several factors beyond strictly market-rate calculations. Such royalty rate must be set to achieve the following statutory objectives:

(A) To maximize the availability of creative works to the public.

(B) To afford the copyright owner a fair return for his or her creative work and the copyright user a fair income under existing economic conditions.

(C) To reflect the relative roles of the copyright owner and the copyright user in the product made available to the public with respect to relative creative contribution, technological contribution, capital investment, cost, risk, and contribution to the opening of new markets for creative expression and media for their communication.

(D) To minimize any disruptive impact on the structure of the industries involved and on generally prevailing industry practices.⁴⁹

The manager's amendment to H.R. 848 would require the CRB to consider the first three criteria above, but the bill does not include the fourth objective. It has been asserted that the fourth factor was decisive in the CRB calculation of royalty rates for satellite radio that are substantially lower than what they might have been under a "willing buyer, willing seller" standard.⁵⁰ However, it remains to be seen whether the first three criteria, in the absence of the fourth consideration, will guide the CRB in determining rates that are lower than those that are the product of the "willing buyer, willing seller" standard.

In addition, the manager's amendment would instruct the CRB, in determining the royalty rates for Section 114 compulsory licenses, to consider evidence on the effect of such rates and terms on the following entities:

- religious, minority-owned, female-owned, small, and noncommercial broadcasters;
- non-music programming, including local news and information programming for stations that are part of station groups in which all stations within the group are located in one designated market area (as determined by Nielsen Media Research); and

⁴⁹ 17 U.S.C. § 801(b)(1)(A)-(D).

⁵⁰ David Oxenford, *Broadcast Performance Royalty Passes House Judiciary Committee - A Work In Progress*, May 13, 2009, available at <http://www.broadcastlawblog.com/2009/05/articles/broadcast-performance-royalty/broadcast-performance-royalty-passes-house-judiciary-committee-a-work-in-progress/> ("[T]he entire 801(b) set of criteria has not been incorporated in the new bill. Specifically, the new criteria omit the one factor that was the most important in cutting the satellite radio royalties from what probably would have been 14% of revenue had a 'willing buyer, willing seller' analysis been used, down to 6-8% of revenues.").

- religious, minority or minority-owned, and female or female-owned royalty recipients.

The section of the manager’s amendment that contains this instruction is titled “preservation of diversity;” presumably, the CRB would be responsible for taking into account evidence of significant negative economic impact on these entities in establishing or adjusting royalty rates that would moderate such impact.

Delay in Effective Date of Legislation

Unique to the House bill (as ordered to be reported out of the House Judiciary Committee) is a provision that would delay the effective date of the legislation for three years after the enactment of the Performance Rights Act in the case of radio broadcasters with annual gross revenues of less than \$5 million, or one year immediately following enactment of the act in the case of a broadcaster making more than \$5 million a year. The precise language of the manager’s amendment provides that radio broadcasters “shall not be required to pay a royalty” during those time periods. However, as noted above, the royalty rate for commercial broadcasters with greater than \$1.25 million in annual revenue is to be determined by the Copyright Royalty Board. A CRB rate-making proceeding often requires several years to conduct.⁵¹ Therefore, for commercial broadcasters that make more than \$5 million annually, the obligation to begin paying royalty rates after the one year delay will likely come to fruition before the CRB issues a decision that establishes the royalty rate. In such a situation, the commercial broadcaster would likely be responsible for paying for royalties retroactively from the date when the CRB establishes the rate.

No Effect on Local Communities

The manager’s amendment to H.R. 848 that was adopted by the House Judiciary Committee contains a provision that would amend Section 114 of the Copyright Act by adding the following:

Neither this subsection nor the payment of royalties by broadcasters hereunder shall affect in any respect the public interest obligations of a broadcaster to its local community under part 73 of title 47 of the Code of Federal Regulations.

The Senate bill does not contain a similar provision. This provision emphasizes that the new royalty payment requirements are not meant to diminish or otherwise alter any public interest obligations of broadcasters under federal communications laws.

Sound Recording Performance Complement

H.R. 848 (as ordered to be reported out of the House Judiciary Committee) would require that traditional radio stations adhere to the same performance limitations that are currently imposed on webcasters and satellite radio (referred to as the “sound recording performance complement”) as part of the conditions of using a Section 114 compulsory license, such as restrictions on their ability to pre-announce the titles of songs that are to be played at a specific time, and limiting the

⁵¹ For example, the CRB announced on January 5, 2009, that it was initiating a rate-making proceeding to determine the royalty rates for Internet radio webcasters that would be applicable for the royalty period that runs from January 1, 2011, through December 31, 2015. Copyright Royalty Board, Library of Congress, *Digital Performance in Sound Recordings and Ephemeral Recordings*, 74 Fed. Reg. 318 (Jan. 5, 2009).

transmission of songs from the same sound recording or by the same artist within a certain period of time. The Senate bill, however, would expressly exempt traditional radio stations from these conditions of the Section 114 license.⁵²

Safeguards for Existing Royalties Paid to Musical Work Copyright Owners

Section 5 of H.R. 848 (as ordered to be reported out of the House Judiciary Committee) has several more subsections than the Senate bill's counterpart, in which the bill takes further steps to emphasize that the royalties currently being paid to songwriters by terrestrial broadcasters are not to be reduced or adversely affected in any way, as a result of the expanded performance right that will be granted to recording artists, musicians, and performers. For example, the House bill declares that license fees payable for the public performance of sound recordings are not to be cited, taken into account, or otherwise used to adjust the license fees payable to *musical work* copyright owners for public performance of their works; for the purpose of reducing or adversely affecting such license fees; in any administrative, judicial, or other governmental forum or proceeding; or otherwise.⁵³ In addition, license fees paid by terrestrial broadcast stations for the public performance of musical works "shall be independent of license fees paid for the public performance of sound recordings."⁵⁴ Furthermore, H.R. 848 expressly spells out the music license obligations of terrestrial radio stations under the Performance Rights Act—in addition to the new requirement of paying for the performance of sound recordings, they must continue to obtain licenses for the public performance of copyrighted musical works contained within sound recordings.⁵⁵

Requirements for Payment of Royalties

The House bill (as ordered to be reported out of the House Judiciary Committee) also contains a sixth section (that the Senate bill lacks) that establishes the following requirements for the payment of royalties:⁵⁶

- A featured recording artist who performs on a sound recording that has been licensed for public performance by means of a digital audio transmission is entitled to receive payments from the copyright owner of the sound recording in accordance with the terms of the artist's contract.
- Sound recording copyright owners must deposit 1% of the receipts from their licensing of public performance rights by means of a digital audio transmission, into a fund established by the American Federation of Musicians and American Federation of Television and Radio Artists, for the benefit of nonfeatured performers who have performed on sound recordings.⁵⁷

⁵² Section 2(d) of S. 379.

⁵³ Section 5(a)(1) of H.R. 848, amending 17 U.S.C. § 114(i).

⁵⁴ Section 5(c) of H.R. 848, amending 17 U.S.C. § 114(f).

⁵⁵ Section 5(a)(1) of H.R. 848, amending 17 U.S.C. § 114(i).

⁵⁶ Section 6 of H.R. 848, amending 17 U.S.C. § 114(g).

⁵⁷ The House bill specifies that the fund shall be distributed 50% to nonfeatured musicians and 50% to nonfeatured vocalists.

- Radio broadcasters must pay 50% of the total royalties owed for the public performance of sound recordings directly to featured and nonfeatured artists, in the proportions called for under existing law.⁵⁸

Supporting the Local Radio Freedom Act

Introduced by Representatives Gene Green and Michael Conaway on February 12, 2009, the Supporting the Local Radio Freedom Act (H.Con.Res. 49) expresses that Congress should not impose any new performance fees, royalties, or other charges relating to the over-the-air broadcasts of sound recordings by local radio stations or by any business engaged in such activity. Representative Green stated that “[r]adio has played a huge role in promoting new music and artists at no cost to the record labels. The performance tax being pushed by the record labels is projected to have a huge price tag costing local stations and the community millions of dollars.”⁵⁹ More than 200 Members of the House have signed onto the non-binding resolution as co-sponsors as of the date of this report.

A similar resolution, S.Con.Res. 14, was introduced on March 30, 2009, by Senator Blanche Lincoln, along with Senator John Barrasso. Senator Lincoln commented that “[t]his resolution will ensure that local radio stations across the country can continue to serve listeners without being subjected to additional fees that could diminish the quality of radio programming, including news, weather and AMBER Alert information that at times proves lifesaving.”⁶⁰

⁵⁸ Under the Copyright Act, the distribution of payments to all artists who performed on sound recordings are to be made as follows: 2.5% to nonfeatured musicians, 2.5% to nonfeatured vocalists, and 45% to featured artists. 17 U.S.C. § 114(g)(2)(B)-(D).

Appendix. License Fees for Public Performance of Music

	Publicly Performing a Work Through Analog Transmission	Publicly Performing a Work Through Digital Transmission
<p>Royalties Due to the Musical Work Copyright Holder—includes the songwriter and the music publisher</p>	<p>As an example, ASCAP offers two types of license agreements:^a</p> <p>(1) A “blanket license” is available for radio stations that broadcast music frequently. The annual fee is a percentage of the station’s annual revenues; the rate for 1996 through 2000 was 1.615% for stations with annual gross revenue over \$150,000, or a minimum of 1% of adjusted gross income.^b</p> <p>For stations that have less than \$150,000 in annual revenue, there is a flat fee schedule that ranges from \$450 to \$1,800.</p> <p>(2) A “per program license” is available for talk and news radio stations that use less copyrighted music; the fee is 0.24% of Adjusted Gross Revenue and covers incidental uses of music.</p>	<p>ASCAP offers several types of licensing agreements for Internet music uses, the fees for which vary depending on the size of the audience, revenue, whether the Internet service is interactive or non-interactive, the number of music performances, among other things.^c The minimum fee for non-interactive Internet websites is \$288, while the minimum fee for interactive sites is \$340.</p>
<p>Royalties Due to the Sound Recording Copyright Holder—includes the performing artist, musicians, and record label</p>	<p>None.</p> <p>However, the Performance Rights Act (H.R. 848 and S. 379), introduced in the 111th Congress, would require terrestrial broadcasters to pay artists and record labels for the right to play sound recordings over the air. The royalty rate would be determined by the Copyright Royalty Board in a ratemaking proceeding.</p> <p>In lieu of this rate, S. 379 would permit commercial broadcasters that have an annual revenue of less than \$1.25 million to elect to pay a fixed \$5,000 royalty fee per year, and public broadcasting entities, including college radio stations, could choose to pay \$1,000 a year, regardless of their annual revenue.</p> <p>H.R. 848, as ordered to be reported out of the House Judiciary Committee, would establish several alternative royalty fees for broadcasters that satisfy the following criteria:</p> <p>(1) If the commercial broadcaster has an annual revenue that exceeds \$1.25 million, the royalty rate would be set by</p>	<p>The Copyright Royalty Board has established the following rates:</p> <p>Commercial webcasters:^d \$.0008 per performance^e for 2006, \$.0011 per performance for 2007, \$.0014 per performance for 2008, \$.0018 per performance for 2009, and \$.0019 per performance for 2010.</p> <p>Noncommercial webcasters:</p> <p>(1) For Internet transmissions totaling less than 159,140 Aggregate Tuning Hours (ATH)^f a month, an annual per channel royalty of \$500.</p> <p>(2) For Internet transmissions totaling more than 159,140 ATH a month, a royalty of \$.0008 per performance for 2006, \$.0011 per performance for 2007, \$.0014 per performance for 2008, \$.0018 per performance for 2009, and \$.0019 per performance for 2010.</p> <p><i>All webcasters must also pay an annual minimum fee of \$500 per channel.</i></p> <p>Satellite radio:^g</p> <p>6 % of gross revenues for 2007 & 2008; 6.5% for 2009; 7% for 2010; 7.5% for 2011; and 8% for 2012.</p>

Publicly Performing a Work Through Analog Transmission	Publicly Performing a Work Through Digital Transmission
the Copyright Royalty Board.	
(2) A commercial broadcaster that has an annual revenue of at least \$500,000 but less than \$1.25 million, may elect to pay a fixed royalty fee of \$5,000 per year.	
(3) A commercial broadcaster that has an annual revenue of at least \$100,000 but less than \$500,000 may elect to pay a fixed royalty fee of \$2,500 per year.	
(4) A commercial broadcaster that has an annual revenue of less than \$100,000 may elect to pay a fixed royalty fee of \$500 per year.	
(5) A public broadcasting entity that has an annual revenue of \$100,000 or more may elect to pay a fixed royalty fee of \$1,000 per year.	
(6) A public broadcasting entity that has an annual revenue of less than \$100,000 may elect to pay a royalty fee of \$500 per year.
